

## Product description

The use of electric volume dispensers makes sense, when media must be applied with high volume accuracy. The delivery rate can be set permanently. A set amount is dosed. The dosage takes place evenly and independently of the filling quantity. They enormously increase the process reliability of a dosage

## Technical description

- Flexible quantity setting
- For media with medium to very high viscosity
- Even material flow
- Volume: 2,32 cm<sup>3</sup> / rev
- Material pressure in the container: 0-6 bar
- Quantity display and signal cartridge empty
- No dripping due to adjustable retraction
- External start via potential-free normally open contact
- Parameters can be set via software or controller

### Options:

9012 Container

4480 Controller

Magnetic limit sensor
